

Updating libraries for Solarmeter

Version 11.42 / 29 april 2017

Since there are many problems with solarmeter and the newer Arduino IDE, I have written an extended instruction on how to update the needed libraries correctly:

<p>Start Arduino (1.6 or newer, in this case 1.8.1)</p> <p>If you look at the code, you will see that <code><Timelib.h></code> and <code><MsTimer2.h></code> appear in black.</p> <p>This means that the compiler could not find the libraries behind this code.</p>	
<p>To install these libraries, you have to use the library manager.</p> <p>Select “Sketch”, “Include libraries” and then “Manage Libraries”</p>	
<p>You will now see a list of libraries that are installed and also all libraries that are available online.</p>	

<p>In the searchbox type “mstimer2” and the selection will be limited to 2 libraries.</p> <p>Click on the one that is called MsTimer2 and then in the “Install” button.</p>	
<p>You will now see a notification that the library is installed.</p>	
<p>Now do the same for the time library. Because there are many libraries using time, type “timekeeping” in the searchbox. This will select only the library solarmeter needs.</p> <p>Select version 1.5.0 to install</p>	
<p>Close the library manager and look at the code. If the color of the lines has changed, you have correctly installed the libraries.</p>	<pre>#include <SPI.h> #include <Ethernet.h> #include <EthernetUdp.h> #include <Dns.h> #include <TimeLib.h> #include <MsTimer2.h> #include <avr/wdt.h> #include <utility/w5100.h></pre>
